

Jeremy

- Survey creation page which can dynamically add questions and options on the client side
- Survey persistent storage and server setup to handle survey creations sent via a post request

Randy

- Login management for staff and users
- Question pool page and suggestions drop down in survey creations page
- Dashboard for staff listing all created surveys
- Page shown to students to gather survey responses
- Use of appropriate OO and SOLID principles

Tom

- Login management for staff and users
- Data setup, storage and management
- Major refactoring of server code to separate files for reusability and maintainability

Jingshi

- UML diagrams such as class diagrams, activity diagrams, and use case diagrams, relevant to the sprint. This helped inform our coding and refactoring of the project
- Convert app to OO (help implement global objects as classes)
